Zenmuse H20 Series Release Notes

Date:	2020.08.24
Zenmuse H20 Series Firmware:	v01.00.02.11
DJI Pilot App Android:	v1.9.0R

What´s New?

- Added menu setting to enable the On-Demand Mode of the laser module, which improves the adaptability of the laser module to different scenarios.

- Added support for customize timestamp, which supports information such as aircraft model, aircraft SN, date and time, and timestamp location can also be customized.

- Added infrared scene modes: Default, Inspection.

- Added sun burn protection for infrared camera sensor, so that the infrared shutter can automatically close when strong sunlight is detected.

- Added support for adjusting the zoom by pressing and holding the confirm button and turning the right dial.

- Added support to manually create folders to save photos and videos, which enables customized folder names.

- Adjusted the split display of the infrared camera, from infrared and wide to infrared and zoom.

- Optimized the loading speed of the playback list, which improves the experience when using the playback function.

- Optimized the stabilization performance of the gimbal.

- Optimized the activation process. The latest DJI Pilot is required for activation.

Zenmuse H20 Series Release Notes

Date:	2020.05.14
